Q7. Execute and Display the Results of cd, cp, and ls Commands in Kali Linux Operating System

AIM

To execute and display the results of the cd, cp, and ls commands in the Kali Linux operating system and understand their basic functions.

PROCEDURE

1. Open the Kali Linux Terminal and navigate to the home directory.
2. Create a sample directory, a directory named Lab_Files, and a sample file using the mkdir and echo commands.
3. Execute the cd command to move between directories, and use pwd to confirm the current location.
4. Execute the cp command to copy a file to a new name and into another directory.
5. Execute the ls command to list the files and directories and verify the results.
6. Observe and verify the output of all three commands and understand their functions.
7. Capture screenshots of the terminal showing the execution and output of the commands as evidence.

COMMANDS TO EXECUTE

First, create a sample directory, a sub-directory, and a file:

```
mkdir Sample
cd Sample
echo -e "Line 1: Kali Linux\nLine 2: Operating System\nLine 3: cd
command\nLine 4: cp command\nLine 5: ls command" > sample.txt
mkdir Lab_Files
cd ..
```

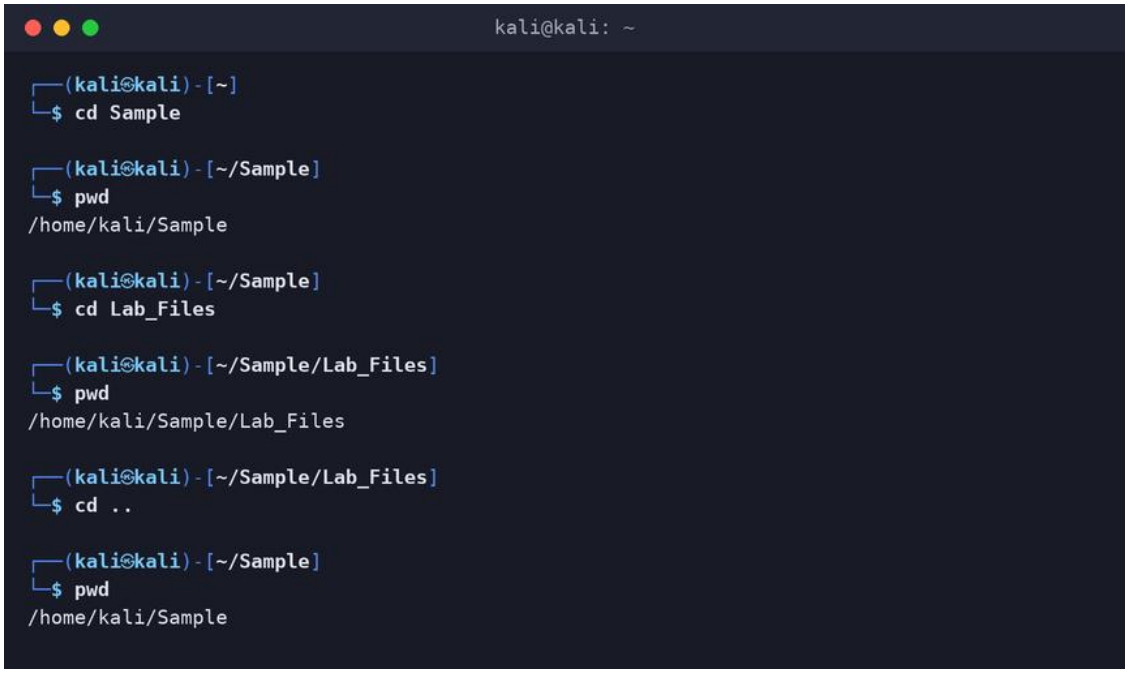

Then execute:

1. cd Command

The cd (change directory) command is used to move from one directory to another. The command cd .. moves one level up to the parent directory, and pwd prints the current working directory.

```
cd Sample
cd Lab_Files
cd ..
pwd
```

OUTPUT:

2. cp Command

The cp (copy) command is used to copy a file from one location to another, or to create a duplicate of a file under a new name. The original file remains unchanged.

```
cp sample.txt copy.txt
cp sample.txt Lab_Files/
```

OUTPUT:

3. ls Command

The ls command is used to list the files and directories in the current directory. The option -l displays a detailed listing with permissions, owner, size, and modification time, and the option -a also shows hidden entries.

```
ls
ls -l
ls -a
```

OUTPUT:

RESULT

The cd, cp, and ls commands were successfully executed in Kali Linux. The cd command was used to change the current working directory, the cp command was used to copy files, and the ls command was used to list the files and directories.
