Q10. Execute and Display the Results of free, sort, and history Commands in Kali Linux Operating System

AIM

To execute and display the results of the free, sort, and history commands in the Kali Linux operating system and understand their basic functions.

PROCEDURE

1. Open the Kali Linux Terminal and navigate to the home directory.
2. Create a sample directory and two text files (fruits.txt and numbers.txt) using the mkdir, cd, and printf commands.
3. Execute the free command to display the memory (RAM and swap) usage of the system.
4. Execute the sort command on the sample files to arrange their lines in order.
5. Execute the history command to display the list of commands entered in the terminal.
6. Observe and verify the output of all three commands and understand their functions.
7. Capture screenshots of the terminal showing the execution and output of the commands as evidence.

COMMANDS TO EXECUTE

First, create a sample directory and files:

```
mkdir Sample
cd Sample
printf 'banana\napple\ncherry\ndate\nelderberry\n' > fruits.txt
printf '30\n5\n100\n20\n' > numbers.txt
```

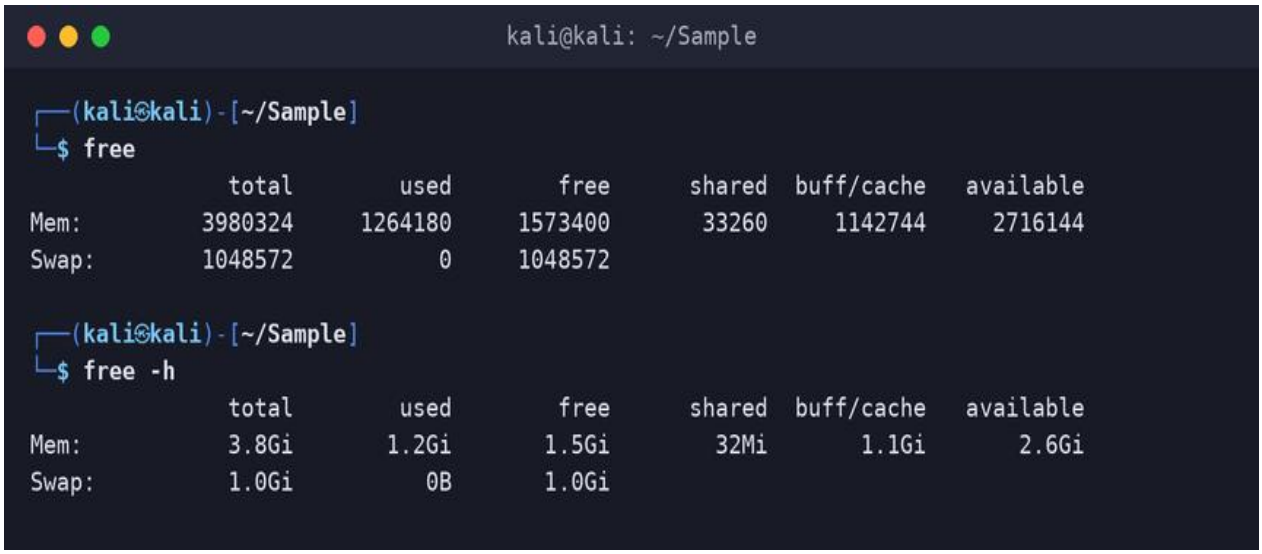

Then execute:

1. free Command

The free command is used to display the total, used, and free amount of physical memory (RAM) and swap memory in the system. The option -h displays the values in a human-readable format (Mi, Gi).

```
free
free -h
```

OUTPUT:

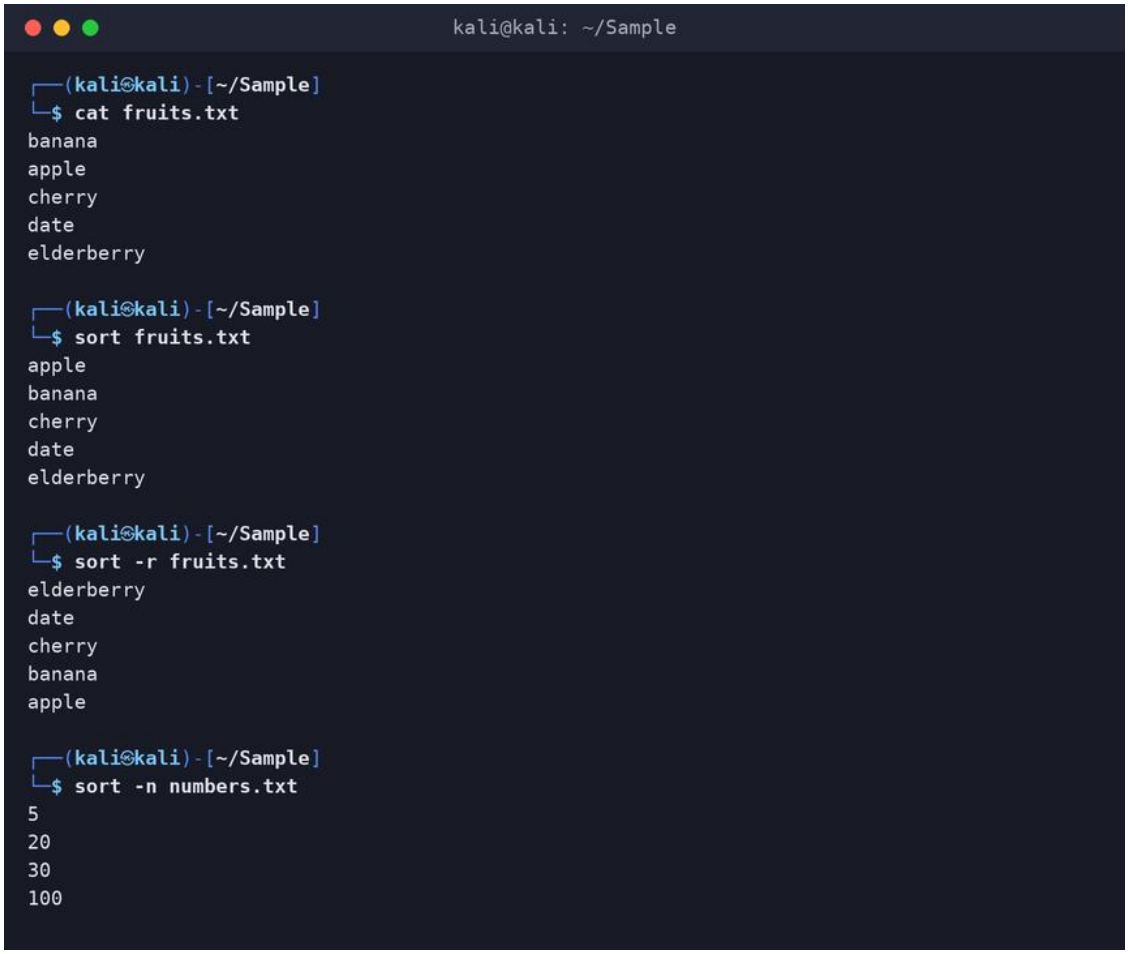

2. sort Command

The sort command is used to arrange the lines of a text file in order. By default it sorts alphabetically in ascending order. The option -r reverses the order, and the option -n sorts numerically

```
cat fruits.txt
sort fruits.txt
sort -r fruits.txt
sort -n numbers.txt
```

OUTPUT:

3. history Command

The history command is used to display the list of commands that were previously entered in the terminal, each with a sequence number.

```
history
```

OUTPUT:

RESULT

The free, sort, and history commands were successfully executed in Kali Linux. The free command was used to display the memory usage, the sort command was used to arrange the lines of a file in order, and the history command was used to display the previously executed commands.
