Q3. Execute and Display the Results of Tree, Head, and Tail Commands in Kali Linux

AIM

To execute and display the results of the tree, head, and tail commands in the Kali Linux operating system and understand their basic functions.

PROCEDURE

1. Open the Kali Linux Terminal and navigate to the home directory.
2. Create a sample directory and files using the mkdir, touch, and echo commands.
3. Execute the tree command to display the directory structure in a tree format.
4. Execute the head command followed by a file name to display the first 10 lines of the file.
5. Execute the tail command followed by a file name to display the last 10 lines of the file.
6. Observe and verify the output of all three commands and understand their functions.
7. Capture screenshots of the terminal showing the execution and output of the commands as evidence.

COMMANDS TO EXECUTE

First, create a sample directory and file

Then execute:

1. **Tree Command**

   The tree command is used to display files and directories in a hierarchical tree structure.

OUTPUT:

2. Head Command

The head command is used to display the first 10 lines of a file by default.

OUTPUT:

3. Tail Command

The tail command is used to display the last 10 lines of a file by default.

OUTPUT:

RESULT

The tree, head, and tail commands were successfully executed in Kali Linux. The tree command was used to display the directory structure, while the head and tail commands were used to display the first and last lines of a text file, respectively.
